48. The broadband wireless system defined in Claim 45 wherein one of said base stations includes said ATM backplane and a network manager for configuring the operating frequencies, establishing modulation rate and establish a selected forward error correction (FEC) value and sets the transmit and power levels for the users thereof. --

**R E M A R K S**

Claims 26, 34 and 42 have been amended, and new Claims 45 - 48 have been added.

Respectfully submitted,

IN THE CLAIMS:

Claims 26, 34 and 42 have been amended as follows:

26. (Twice amended) An interface system at a base station in a cell within a cellular wireless network for providing bi-directional wireless communications to Network Interface Units (NIUs) within the cell and for providing a point to point direct inter-cell radio link for communicating with a base station in a neighboring cell comprising; [a] an ATM multi-services switch equipped with a first one or more radio interface card for providing wireless communications between the base station and the NIUs and a second one or more interface card for providing the direct inter-cell radio link.

34. (Twice amended) A base station in a cell of a cellular, wireless communications network for providing wireless, bi-directional communication with network interface units (NIUs) within the cell and for providing a point to point direct inter-cell radio link with a base station in a neighboring cell, the base station having [a] an ATM multi-services switch equipped with a first radio interface card for providing the wireless, bi-directional communication between the base station and the NIUs and a second interface card for providing the direct point to point radio inter-cell link.

42. (Twice amended) A method of providing communications between base stations in a cellular, wireless network having multiple cells, each of the multiple cells having a base station, the method comprising providing [a] an ATM multi-services switch at each of the base stations, each switch being equipped with a radio interface card for providing direct bi-directional communication with other base stations in the network; providing a network manager in association with at least one of the base stations for configuring the radio interface cards, and providing a directional antenna for each multi-services switch to support point to point bi-directional communication between base stations over a direct radio inter-cell link.
